### **Part III DETAILED ACTION**

Claims 1-24 are currently pending.

#### **Restriction Requirement**

Restriction to one of the following inventions is required under 35 USC 121 <sup>1</sup>.

Claim 24 is not addressed in the restriction requirement as it is a dependent drawn to a pharmacophore while the base claim is drawn to a computer.

Claims 1, 13-16 are linking claims and will be considered together with a Group elected from Groups I-VI.

- I. Claims 2 (in part), 3, drawn to pharmacophore binding to surface defined by residues 342 and 349 of interface I.
- II. Claims 2(in part), 4 drawn to pharmacophore binding to surface defined by residues 446, 455, 456 of interface I.
- III. Claim 5, 6, drawn to pharmacophore binding to interface II.
- IV. Claims 8-10, drawn to a peptide pharmacophore.
- V. Claim 11, drawn to an antibody pharmacophore.
- VI. Claim 12, drawn to small molecule pharmacophore.

---

<sup>1</sup> Note that the majority of claims can not be classified in view of indefiniteness of the structures they are claiming.

Art Unit: 1631

- VII. Claims 17,18, drawn to method of use of compounds of Groups I-VI, classified in class 514, in general.
- VIII. Claims 19-23, drawn to a computer, classified in class 707, subclass 12.

The inventions are distinct, each from the other because of the following reasons:

The inventions of Groups I-VI are patentably distinct from each other because of the materially different structures of the compounds they are claiming. Each of these compounds possess different structure (e.g., primary, secondary and tertiary structure) and/or physico-chemical properties, and/or capable of separate manufacture and/or use. Additionally, these different groups do not share a common structure which elicits a common activity. A reference teaching one product (e.g., a small molecule) will not teach another product (e.g., antibody). The correspondent methods of use are independent and/or distinct due to the use of different patentably distinct agents.

Inventions I-VI and VII are related as products and process of use. The inventions can be shown to be distinct if either or both of the following can be

Art Unit: 1631

shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products as claimed in general terms can be used in a materially different processes such as organic synthesis.

The computer of Group VIII is not patentably distinct from any computer as the structure information recited is non-functional descriptive material which does not bring distinguishing characteristics. Thus, the computer can be used for any other application, such as representation of spatial orientation of objects.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if

Art Unit: 1631

one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
